**Military &
Aerospace**

HumiSeal®

Military & Aerospace Electronics

HumiSeal® is the only supplier specialized in conformal coating manufacture.

With a rich history of innovation for more than 50 years, our product offerings and technical support is second to none.

Military applications often push technologies to their limits. ISR (Intelligence, Surveillance, and Reconnaissance), electronic warfare (EW), radar, and communications have made many demands on RF/microwave technologies over the years.

Levels of integration have increased with growing demands for greater packaging densities, reduced weight, increased reliability over a wider range of operational parameters such as wider temperature ranges, increased thermal rates of change, greater ranges of vibration and longer storage in field conditions at the point of deployment. One of the challenges most unique to military and aerospace electronics is the high value of and length of service expected of these assemblies, often being 20-30 years. During the program life, the electronics are likely to be periodically repaired, refurbished and upgraded. Therefore, the degree of reworkability of the coating material needs to be thoroughly evaluated and the reliability of repair solutions thoroughly evaluated during the design process.

These electronic assemblies continue to become an increasingly sophisticated and important aspect of both the functionality and reliability of modern military and aerospace systems. The costs of failure, both in direct fiscal cost and especially the loss of highly trained personnel and civilian casualties are extremely high, and so it is extremely important that these systems function exactly as required, when required, for the entire duration of the program. Conformal coating is one of the main mitigation solutions, preventing degradation to the assembly from the external environment.

With recent changes in OEM requirements related to CSR (Corporate Social Responsibility), ISO 140001 commitments and the need to drive out cost, both within their own factories and throughout their supply chains, and the continuous need to “do more with less”, HumiSeal has a wide range of environmentally compliant, low-outgassing, fast curing, high throughput, solvent-free materials, in addition to a wide range of traditional solvent-borne chemistries.

HumiSeal®, the world's leading formulator of conformal coatings, is proud to offer the most complete range of military and aerospace approved materials on the market.

We developed the world's first conformal coating over 50 years ago and continue to lead the market in terms of innovation and experience.

Our range embraces all major polymer types and multiple cure mechanisms. This guide aims to highlight the most popular products—other military approved coatings are featured in the low VOC product guide.

Acrylic Materials

Widely specified throughout the aerospace and defence industries, especially where humidity and condensation are main threats:

- Fast drying by solvent evaporation
- Ease of application all application methods
- Easiest coatings to rework
- Excellent resistance to moisture
- Superb flexibility over a wide temperature range

Urethane Materials

Widely specified in environments requiring solvent resistance:

- Easy to apply by all application methods
- Very good chemical and solvent resistance
- Repairable
- Fast drying and cross linking reactions
- Good flexibility over a wide temperature range

**Whatever your requirements,
HumiSeal has the solution.**
